

p78 CareerStudio

Modern career sites without compromise

Today, career sites offer much more than just a list of job openings. They are a central part of the candidate experience and an important point of contact for potential applicants. However, many companies struggle to update content quickly while taking global requirements into account and adhering to design, compliance, and governance standards.

Your benefits at a glance

- Seamless integration into existing websites
- A flexible and future-proof career platform
- Maximum flexibility in design and content structure
- Expandable with recruiting features / addOns
- A Consistent Candidate Experience Worldwide
- Faster content management through HR ownership

The p78 CareerStudio app combines a modern CMS system with powerful recruitment features, enabling companies to create customised career sites that reflect their brand. HR and recruitment teams can independently manage content, and companies benefit from a flexible, scalable platform and consistent candidate experience.

Feature Overview

Flexible content builder:

A component builder with advanced features that includes interactive elements to allow for flexible page layouts.

Content approval processes:

Secure and controlled publishing with structured approval workflows — ideal for international teams.

HR-driven content management:

Intuitive content management and updates without relying on IT or agencies.

Simple third-party integrations:

Flexible integration of additional tools and add-ons, such as those for analytics, marketing, or candidate engagement.

Seamless integration of the p78 SmartRecruiters addOns:

Expandable recruiting features without the need for additional integration efforts.

Responsive Design:

Optimal display and usability on all devices — from smartphones to desktops.
